PORTABULK®

Interested in lowering your bag and packaging costs? Portabulk is the way to go. The Portabulk design uses all of its fabric to generate strength instead of just using the lift loops as in traditional bag design. The Portabulk bag can hold 3,000 pounds of product with a 5 to 1 safety factor, allowing it to lift more weight with lighter material and lower bag costs.

The easy to use single point pick-up also eliminates the need for pallets, saving you additional money and space. The single point lift also eliminates the need for bridles or stevedore straps, but still facilitates overseas shipping.

The broad base of the Portabulk bag makes stacking easy. The natural nesting of bulk bags also makes the double stacked bags very stable. The Portabulk bag. Saving you space, time and, best of all, money!

Contact your AmeriGlobe representative to determine if the Portabulk bag is right for your packaging needs.
